DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16 and 19-23, drawn to a system and corresponding method for carrying and moving an object in a plane with linear actuators, classified in class 310, subclass 12.
 - II. Claims 17, 18, 24, and 25, drawn to lithographic apparatus and corresponding method for patterning a beam of radiation and projecting the patterned beam onto a target portion of a substrate, classified in class 355, subclass 53.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require that the third and fourth linear actuators are adapted to support the first and second linear actuators. The subcombination has separate utility

such as any system for moving an object other than a substrate and which does not have a projection system.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
